a. Using simple code, explain what kind of situations would you use the methods:

=> If you go to [documentation](#), you can see in 'Admin/Loan/Type'.

GET is used for list of data or single data.

POST is used for creating LoanType.

PATCH/PUT is used for updating existing data.

DELETE is used for deleting data.

B. Explain in your own words, what kind of "authentication" works best for a web service that needs to be secure, yet easy to implement across different programming languages.

You may want to give an example of how to call this API.

=> JWT authentication is easy to implement and secured. I have used that authentication in my demo [project](#).

C. What kind of format is best to be returned by an API as a response? Explain your answer and provide comparisons, if needed.

=> JSON response is best compared to XML.

Moreover, [Reference](#) is best because it gives unique data even with relationships,
